

Zhou Tianyi

Information

Tel: (+65)86049530 / (+86)13817511539	Gender: Female
E-mail: tianyi_zhou2000@163.com	Date of Birth: 2000.04
Expected Graduation Date: 2024.01	Place of Household Registration: Shanghai, China

Education

National University of Singapore	<i>Master of Science, Industrial and System Engineering (Data Analytics Specialization)</i>	2022.08-Now
Core Coursework: Stochastic Models and their Applications, Applied Engineering Statistic, Applied Programming for Industrial Systems, Statistical Learning in Engineering, Applied Forecasting Methods		
South China University of Technology	<i>Bachelor of Management, Electronic Commerce</i>	2018.09-2022.06
Core Coursework: Calculus, Statistics, Operations Research, Database Principals and Applications, Data Mining, Data Structure, ERP		
Honors: Philip K.H. Wong Foundation (2021), First-class Scholarship (2020), Outstanding Student Leader (2019)		

Internships

GF Fund Management Co., Ltd	<i>Data Analyst Intern</i>	2021.12-2022.01
Used Python for tasks like image plotting, function fitting, and cluster analysis. With various factors including customer attributes, market fluctuations, and product returns as influencing factors, established a model for predicting the timing of customer redemption of investment products.		
KPMG China	<i>Assistant Technical Consultant</i>	2021.07-2021.08
Contributed to designing the interface and rules for trading systems, conducted research on projects like digital factories, cross-border e-commerce, and enterprise-related risks, assisted client companies in their IPO listing process.		

Projects

Interconnected Pattern of the Pearl River Delta Urban Agglomeration's Digital Economy Based on Organizational Relationships among Enterprises	<i>Paper, Second Author</i>	2022.04-2023.06
Incorporated chain network models and social network analysis by utilizing data from corporate headquarters and branch offices to build urban network models using Python and ArcGIS and investigated the digital economic connections and spatiotemporal evolution within the Pearl River Delta urban cluster. Has been accepted for publication in the journal <i>Tropical Geography</i> .		
Flight Reservation Simulation System	<i>Course Project</i>	2022.11
Used Python to perform procedural and object-oriented programming. Leveraging data structures and algorithms, it took inputs as departure location, destination, departure date, cabin class and passenger count to provide recommended flight combinations, which included flight numbers, arrival times, stopover counts and prices.		
Research and Empirical Study on Growth Stock Investment Strategy and Risk Management	<i>Paper</i>	2022.01-2022.06
Built a stock selection model for growth stocks by quantitatively describing investment returns and risks. Conducted backtesting simulations on a quantitative trading platform		
The 30th National University Mathematical Modeling Competition	<i>Second Prize of Guangdong Province</i>	2021.09
Utilized Python to establish a mathematical model to investigate the impact of catalysts and temperature on the yield of a chemical product. Introduced dummy variables to discretize various catalytic factors, built a multiple linear regression model and quantitatively analyzed the effects of different catalyst-temperature combinations on yield. Also applied Monte Carlo methods and intelligent algorithms to solve a nonlinear 0-1 programming model based on the multiple linear regression model.		
IKCEST 'Belt and Road' International Big Data Competition	<i>Excellence 47/3023</i>	2020.05-2020.09
Constructed a population transmission forecasting model for a certain infectious disease by the daily increase in infection cases within a time series. Expanded the sample size using linear interpolation and employed linear regression, RNN, LSTM and iterative LSTM models to predict daily new infection numbers.		

Skills

Proficient in English, suitable for use as a working language. Proficient in Python, Java, SQ and Office software.
